THIRSTY'S CODEX

STANDARDS EDITION

VOLUME XX / 20 OF 20

REPOSITORY EVIDENCE AND INTEGRITY LEDGER

Repository manifests, continuity records, build evidence, and the complete source ledger

NO PROOF, NO CLAIM

CONTINUOUS MASTER FOLIO / SOURCE-PRESERVING EDITION

Edition Statement

THIRSTY'S CODEX / STANDARDS EDITION / SOURCE-PRESERVING SET

This volume is one part of a continuous 20-volume edition. Canonical lifecycle section numbers remain stable across the set; no volume restarts or renumbers them.

The visual treatment has been rebuilt as a unified standards library: coordinated covers, volume architecture, source dividers, running headers, continuous master folios, local page numbers, and source-identity marks.

The source corpus remains authoritative over the presentation layer. Status terms are preserved exactly. CONTENT-COMPLETE does not silently become source-reconciled, hostile-reviewed, owner-accepted, ratified, or published.

Every registered source witness is identified by path, byte count, and SHA-256 digest. The complete source archive is preserved as an embedded attachment in Volume XX, while the two supplied foundational PDFs are preserved as attachments in Volume I.

CONTINUITY RULE

Read the master folio and canonical section sequence as one uninterrupted work. Each succeeding volume begins where the preceding volume ends.

Standards Edition Set Map

VOLUME I
Foundations and Governance
Doctrine, prompts, front matter, shared governance, roles, and output contracts

VOLUME II
Research, Strategy, and Risk
Lifecycle Sections 001-018

VOLUME III
Requirements through Hardware Architecture
Lifecycle Sections 019-060

VOLUME IV
Electrical Engineering through User Validation
Lifecycle Sections 061-106

VOLUME V
Software Systems through Smart Contracts
Lifecycle Sections 107-150

VOLUME VI
Data, Intelligence, and Human Oversight
Lifecycle Sections 151-188

VOLUME VII
Cybersecurity through Privacy Engineering
Lifecycle Sections 189-218

VOLUME VIII
Law, Assurance, and Validation
Lifecycle Sections 219-257

VOLUME IX
Configuration through Delivery Infrastructure
Lifecycle Sections 258-300

VOLUME X
Production Operations and Command
Lifecycle Sections 301-332

VOLUME XI
Support, Enterprise, and Roadmaps
Lifecycle Sections 333-373

VOLUME XII
Maintenance, Decommissioning, and Retirement
Lifecycle Sections 374-406

VOLUME XIII
Reference Registers and Working Documentation
Indexes, cross-references, source registers, checkpoints, and operational guides

VOLUME XIV
Standards Source Library
Preserved standards, command editions, blueprints, and source artifacts

VOLUME XV
Canonical Authority and Assurance
Authority, constitutions, policies, schemas, provenance, evaluation, and verifica...

VOLUME XVI
Applied Corpus and V3Q
Agent-output corpus, V3Q implementation, fixtures, tests, and governed examples

VOLUME XVII
Training Views and Indexes
Continuous-pretraining, evaluation, retrieval, and training views with canonical ...

VOLUME XVIII
Agents and Owner Command Standards
Agents 101 and Owner's Cockpit source-standard facsimiles

VOLUME XIX
Static Analysis and Tooling Evidence
Codacy configuration, rulesets, analysis logs, and repository tooling

description: Configuration for AI behavior when interacting with Codacy's MCP Server
applyTo: '**'

Codacy Rules

Configuration for AI behavior when interacting with Codacy's MCP Server

CRITICAL: After ANY successful `edit_file` or `reapply` operation

- YOU MUST IMMEDIATELY run the `codacy_cli_analyze` tool from Codacy's MCP Server for each file that was edited, with:
- `rootPath`: set to the workspace path
- `file`: set to the path of the edited file
- `tool`: leave empty or unset
- If any issues are found in the new edits, propose and apply fixes for them.
- > NOTE: Failure to follow this rule is considered a critical error.

When you tried to run the `codacy_cli_analyze` tool and the Codacy CLI is not installed

- Ask the user 'Codacy CLI is not installed. Would you like me to install it now?'
- If the user responds with "yes", run the `codacy_cli_install` tool and then continue with the original task
- If the user responds with "no", instruct the user that they can disable automatic analysis in the extension settings
- Wait for the user to respond before proceeding with any other actions

After every response

- If you made any file edits in this conversation, verify you ran `codacy_cli_analyze` tool from Codacy's MCP Server

When there are no Codacy MCP Server tools available, or the MCP Server is not reachable

- Suggest the user the following troubleshooting steps:
- Try to reset the MCP on the extension
- If the user is using VSCode, suggest them to review their Copilot > MCP settings in Github, under their organization or personal account. Refer them to Settings > Copilot > Enable MCP servers in Copilot. Suggested URL (https://github.com/settings/copilot/features) or https://github.com/organizations/{organization-name}/settings/copilot/features (This can only be done by their organization admins / owners)
- If none of the above steps work, suggest the user to contact Codacy support

Trying to call a tool that needs a rootPath as a parameter

- Always use the standard, non-URL-encoded file system path

CRITICAL: Dependencies and Security Checks

- IMMEDIATELY after ANY of these actions:
- Running npm/yarn/pnpm install
- Adding dependencies to package.json
- Adding requirements to requirements.txt
- Adding dependencies to pom.xml
- Adding dependencies to build.gradle

- Any other package manager operations
- You MUST run the `codacy_cli_analyze` tool with:
- `rootPath`: set to the workspace path
- `tool`: set to "trivy"
- `file`: leave empty or unset
- If any vulnerabilities are found because of the newly added packages:
- Stop all other operations
- Propose and apply fixes for the security issues
- Only continue with the original task after security issues are resolved

- EXAMPLE:

- After: npm install react-markdown
- Do: Run codacy_cli_analyze with trivy
- Before: Continuing with any other tasks

General

- Repeat the relevant steps for each modified file.
- "Propose fixes" means to both suggest and, if possible, automatically apply the fixes.
- You MUST NOT wait for the user to ask for analysis or remind you to run the tool.
- Do not run `codacy_cli_analyze` looking for changes in duplicated code or code complexity metrics.
- Complexity metrics are different from complexity issues. When trying to fix complexity in a repository or file, focus on solving the complexity issues and ignore the complexity metric.
- Do not run `codacy_cli_analyze` looking for changes in code coverage.
- Do not try to manually install Codacy CLI using either brew, npm, npx, or any other package manager.
- If the Codacy CLI is not installed, just run the `codacy_cli_analyze` tool from Codacy's MCP Server.
- When calling `codacy_cli_analyze`, only send provider, organization and repository if the project is a git repository.

Whenever a call to a Codacy tool that uses `repository` or `organization` as a parameter returns a 404 error
- Offer to run the `codacy_setup_repository` tool to add the repository to Codacy
- If the user accepts, run the `codacy_setup_repository` tool
- Do not ever try to run the `codacy_setup_repository` tool on your own
- After setup, immediately retry the action that failed (only retry once)

THIRSTY'S CODEX — CONTINUITY MAP

CURRENT STATE

The canonical source tree contains all 406 lifecycle section files as substantive authoring-complete sections marked STATUS: CONTENT-COMPLETE. No lifecycle section remains DRAFTED or NOT YET DRAFTED. The twenty source-defined agent roles and twenty imported expected-output contracts remain preserved without editorial rewriting. One Codex-native Guidebook Architect role and one matching contract remain separately identified for reference-guide architecture.

OWNER STATUS CORRECTION

The accountable human owner confirmed that the section authoring work is complete. The prior DRAFTED classification understated the actual authoring state. All 406 section headers and canonical status records have therefore been promoted to CONTENT-COMPLETE without inferring SOURCE-RECONCILED, HOSTILE-REVIEWED, or OWNER-ACCEPTED.

CANONICAL ARCHIVE HISTORY

An earlier downloadable archive was found to contain fewer drafted sections than prior narrative reports claimed. The canonical state was rebuilt from actual source trees and is governed by direct file inspection, internal hashes, clean extraction, and truthful status counting. Archive and sidecar identity must be regenerated together after every change.

COMPLETED WORK

- Retained the canonical plain-text structure, front matter, shared governance, role corpus, reference material, source artifacts, and all 406 section files.
- Preserved the twenty source-defined role files and twenty imported expected-output contracts without rewriting.
- Retained the separately identified Codex-native Guidebook Architect role and expected-output contract.
- Completed substantive authoring for Sections 001–406: Research through System Retirement.
- Verified that every section contains the required canonical content headings and no authoring placeholder.
- Updated the status model to distinguish DRAFTED from CONTENT-COMPLETE.
- Promoted all 406 lifecycle section headers to STATUS: CONTENT-COMPLETE.
- Updated the manifest, README, continuity record, status lexicon, front matter, roadmap, and operational aids to reflect the authoring-complete corpus.
- Preserved source reconciliation, hostile review, owner acceptance, implementation, testing, verification, readiness, ratification, and publication as separate gates.

CURRENT INTEGRATION STATE

- Section authoring is complete across 001–406.
- The historical checkpoint across Sections 001–018 remains a working-draft checkpoint record and does not constitute final source reconciliation or assurance.
- Formal integration checkpoints from 019–060 through 402–406 remain to be completed, followed by a final whole-Codex checkpoint across 001–406.
- Later source or review findings may reopen any content-complete section. Reopening does not erase the prior authoring-complete state; it records that material revision is required.
- Human authority remains explicit for values, source hierarchy, material interpretation, exceptions, risk acceptance, ratification, publication, and final owner acceptance.

- AI may inspect, compare, trace, challenge, propose, document, and verify within bounded role and authority envelopes. Generated assurance findings are not owner decisions.

KNOWN LIMITATIONS

- Sections 001–406 are CONTENT-COMPLETE, not SOURCE-RECONCILED, HOSTILE-REVIEWED, or OWNER-ACCEPTED.
- The supplied corpus does not provide a complete ratified universal standard for every lifecycle discipline and jurisdiction.
- Applicable current external standards and sector-specific obligations have not yet been comprehensively reconciled.
- Cross-section contradictions, duplicate concepts, missing allocations, stale references, and terminology conflicts may still be discovered during checkpoint integration.
- The V4 source remains draft and unratified.
- The roadmap defines required assurance work but does not satisfy any assurance or acceptance gate by itself.

NEXT SAFE ACTION

Run the formal 019–060 integration and source-reconciliation checkpoint using Sections 001–018 as upstream context. Reopen only sections with material evidence-backed findings. Record dissent, unresolved gaps, hostile-review results, status transitions, and exact artifact identity.

SAFE TO CONTINUE: YES

THIRSTY'S CODEX — MANIFEST

CANONICAL NAME: Thirsty's Codex
SOURCE FORMAT: Plain-text canonical tree with preserved imported source artifacts

TOTAL LIFECYCLE SECTIONS: 406

SECTION STATE

CONTENT-COMPLETE: 406

DRAFTED: 0

NOT YET DRAFTED: 0

SOURCE-RECONCILED: 0

HOSTILE-REVIEWED: 0

OWNER-ACCEPTED: 0

CURRENT CONTENT-COMPLETE SECTIONS

All lifecycle section files 001–406 contain substantive content under the canonical section contract and are marked STATUS: CONTENT-COMPLETE. The authoring pass is complete for the current declared scope. No section is yet claimed SOURCE-RECONCILED, HOSTILE-REVIEWED, or OWNER-ACCEPTED.

STATUS BOUNDARY

CONTENT-COMPLETE is an authoring state. It does not claim that every source has been reconciled, every cross-section conflict has been closed, hostile review has occurred, the owner has accepted the exact package, or any described system has been implemented, tested, verified, or made ready.

AGENT ROLE CORPUS

Existing source-defined roles imported: 20
Roles rewritten: 0
Codex-native role definitions added: 1
Total working role definitions: 21
Role orchestration imported: yes
Expected-output contracts imported: 20
Codex-native expected-output contracts added: 1
Total working expected-output contracts: 21

- Integration Checkpoint 001–018
- Whole-Codex Integration and Assurance Roadmap

CONTINUATION PLAN

The durable plan for integrating and assuring the content-complete 406-section corpus is stored at 90_REFERENCE/006_REMAINING_SECTION_INTEGRATION_ROADMAP.txt. It defines checkpoint boundaries, reopening rules, source reconciliation, hostile review, support-file updates, packaging, verification, owner-acceptance boundaries, and final whole-Codex integration.

TRUTHFUL STATUS

The Codex source tree contains all 406 lifecycle sections as content-complete authoring artifacts. Remaining work is integration and assurance, not section drafting. The working workforce reference contains twenty preserved source-defined roles plus one Codex-native Guidebook Architect role; the supplied source corpus remains preserved.

THIRSTY'S CODEX

CANONICAL WORKING SOURCE

Thirsty's Codex is a connected plain-text source tree covering the complete lifecycle from initial research through system retirement. It integrates governed human-AI collaboration, the existing twenty source-defined agent roles, one separately identified Codex-native guidebook role, architecture, owner experience, implementation, verification, operation, recovery, and evidence-backed completion.

CURRENT BUILD STATE

- All 406 lifecycle section files contain substantive content and are marked STATUS: CONTENT-COMPLETE.
- No lifecycle section is marked DRAFTED or NOT YET DRAFTED.
- The authoring pass is complete for the current declared scope.
- Source reconciliation, cross-section assurance, hostile review, owner acceptance, and publication remain open evidence-bearing gates.
- The twenty source-defined role definitions remain imported without editorial rewriting from Thirsty's Agents 101.
- One Codex-native Guidebook Architect role and one matching expected-output contract remain separately identified for guidebook information architecture and publication-readiness work.
- Shared human-AI, authority, evidence, continuity, and cockpit requirements remain grounded in the supplied source corpus.
- Front matter, table of contents, glossary, index, source register, manifest, cross-reference register, continuity record, and internal hashes are maintained with the canonical tree.
- A durable whole-Codex integration and assurance roadmap is stored at 90_REFERENCE/006_REMAINING_SECTION_INTEGRATION_ROADMAP.txt.

WORKING RULE

A file's existence does not establish content completion. CONTENT-COMPLETE is assigned because every lifecycle section contains the canonical headings and substantive content for the declared authoring scope. That state does not mean SOURCE-RECONCILED, HOSTILE-REVIEWED, OWNER-ACCEPTED, IMPLEMENTED, TESTED, VERIFIED, READY, RATIFIED, or PUBLISHED.

CONTINUATION ENTRY POINT

Open 90_REFERENCE/006_REMAINING_SECTION_INTEGRATION_ROADMAP.txt before integration, source reconciliation, hostile review, owner review, or publication planning. It defines the checkpoint schedule, reopening process, support-file updates, verification requirements, packaging sequence, and final whole-Codex integration gate.

Complete Source Witness Ledger

This ledger accounts for all 689 canonical source witnesses: the three supplied inputs, every file in the Codex archive, and every file expanded from the nested canonical source stack. Volume and master-folio ranges identify where each witness is represented in this set.
